

MIP_ENGINEERING_PLAYBOOK.md

Mainframe Intelligence Platform

Engineering Playbook

Version: 1.0

Purpose

Define how MIP is built.

This is the operational guide for engineers.

Engineering Philosophy

Source Code

Modernization Intelligence

Never skip steps.

Development Lifecycle

Step 1

Discovery

Identify:

- COBOL
- JCL
- Copybooks
- DB2
- VSAM

Output:

Inventory

Step 2

Metadata

Extract:

- Programs
- Jobs
- Tables
- Relationships

Output:

Canonical Metadata

Step 3

Knowledge Graph

Build:

Nodes

Edges

Traversal Rules

Output:

Step 4

Reasoning

Generate:

- Impact Analysis
 - Dependency Analysis
 - Root Program Discovery
-

Step 5

Modernization

Identify:

- Services
 - APIs
 - Events
-

Engineering Workflow

Implement

↓

Test

Refactor

Document

Pull Request Process

Requirements:

- Tests pass
 - Documentation updated
 - Review completed
-

Repository Governance

Use:

- Skills
- Prompt Library
- Standards

Avoid:

- Ad hoc design
 - Undocumented decisions
-

Definition of Ready

Feature must have:

- Requirements
 - Metadata impact
 - Test strategy
-

Definition of Done

Feature must have:

- Implementation
 - Tests
 - Documentation
 - Review
-

MIP Success Metric

A new engineer can:

- Clone repository
- Understand architecture
- Run discovery
- Build metadata
- Build graph
- Extend platform

Within one day.
